Los Angeles, CA • praketaggarwal@gmail.com • (213)-902-6040 • [LinkedIn](#) • [Portfolio](#)

EDUCATION

University of Southern California

Master's in computer science - Game Development

Relevant Coursework: 3D Graphics and Rendering (C++), Game Design Workshop

Los Angeles, CA

Expecting: May 2027

NMIMS Mukesh Patel School of Technology, Management and Engineering

B. Tech Information Technology: CGPA:3.77/4

Relevant Coursework: Data Structures and Algorithms (C++), Object Oriented Programming (OOP in Java), Cloud Computing (Azure and AWS), Software Engineering (SDLC and Agile, Testing)

Mumbai, Maharashtra

Graduated: May 2025

EXPERIENCE

Avian Hearts - Game Development Intern

June 2024 –August 2024

- Worked in a large cross functional team on a variety of tasks including skeletal rigging, level design and programming
- Implemented a host client architecture using PHOTON to enable multiplayer functionality.
- Worked on Firebase to implement database connectivity with unity to store player data and provide authentication as well as connect player to account services such as Google Play.
- Applied agile methodologies and version control technologies like **JIRA** and **GIT** to ensure team collaboration.

Compusoft Advisors India Pvt Ltd – Software Engineer Intern

May 2023 – July 2023

- Built and deployed an automated Tax Reconciliation System using .Net Web API and Azure AI Services

SKILLS

Programming Languages: Java, C++, Python, C#

Development Platforms: Unity, Microsoft Azure, Godot

Version Control: GIT, GitHub

Certifications: Microsoft Certified: Azure AI Engineer Associate (AI 102)

PROJECTS & ACTIVITIES

DaGame– A 2D Platformer (Solo Project) – Unity, C#

- Created a classic 2D Platformer based around avoiding traps and collecting collectibles using Pixel Adventure Assets.
- Designed state machines to handle animation, sound as well as movement.
- Designed 5 levels that display a wide variety of traps such as moving saws, falling platforms, disappearing spikes etc

Square Game– A 2D Platformer (Solo Project) – Unity, C#

- A momentum-based platformer focused around sticking to walls and objects to collect collectibles and reach the end
- Uses Unity's URP and shadow system to implement a colorful bright and futuristic aesthetic.
- Implemented force-based traps and shooting mechanics.

Rat Stranding– A 2.5D Stealth Puzzle Game – Godot, GDScript

- Designed AI detection and pathing using A* with a nav mesh. Created a state machine for search, chase, patrol and idle states.
- Implemented UI functionalities including the main menu and settings

AfterEve– A roguelike bullet hell game (Ongoing) - Unity, C#

- Working as a programmer on enemy AI and movement systems in a team of **20 people**
- Creating classes and interfaces in Unity

Haunted House Builder– A 3D Business Sim Game– Unreal Engine 5 (ongoing)

- Created as a part of Scream Jam 2025 and beyond by a team of 9
- Key responsibilities include coordinating a team working across different time zones, Building and revising a Game Design document, managing and distributing tasks and maintaining a task sheet.
- Working as a designer and programmer to design and implement objects and player actions.
